

# **Summary and Extracted Actions**

**RA II WIGOS Project**  
to Develop Support for NMHSs  
in Satellite Data, Products and Training

**The 4th Meeting of the Coordinating Group**  
**28 October, Songdo Korea**

- For training, participants want for speaker to be more interactive and for training session to be more focused on practical and real-time analysis for “nowcasting”, “tropical storm analysis” and “convective cloud analysis”
- Co-coordinators of RAI WIGOS project and the Chair of the “RA-V Task Team on Satellite Utilization” provide the WMO and host country of AOMSUC and training event with the requirement from trainees which can be reflected in the next Conference

(Action : WMO, JMA, KMA, AuBoM)

- The preliminary study using two geo-satellites of COMS and MTSAT-2 before launch of AMI with the case of typhoons and developing convective clouds showed relatively reasonable results
- Co-coordinators would conduct the additional cases of typhoon and rapidly developing thunderstorm to investigate the feasibility using the multi-geo-satellites (i.g. COMS, MTSAT, FY-4) for preparation of next generation imagers over Asia-Oceania region.

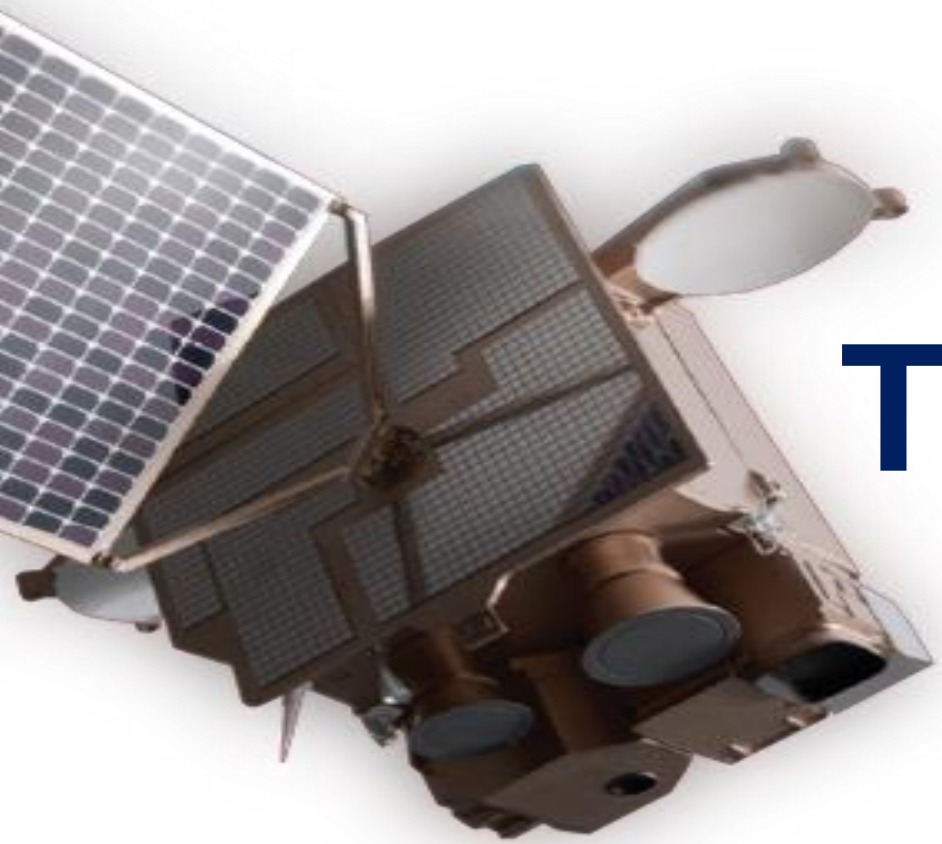

(Action : KMA, JMA, CMA)

- To establish a close coordination and create synergy between ongoing projects such as WMO-CGMS VLab, “RA II WIGOS Project to Develop Support for NMHSs in Satellite Data, Products and Training” and the “ RA-V Task Team on Satellite Utilization” while avoiding duplication of effort;
- The Co-coordinators of the existing “RA II WIGOS Project to Develop Support for NMHSs in Satellite Data, Products and Training”, and the Chair of the “RA-V Task Team on Satellite Utilization” will attend at the respective meeting on a reciprocal basis, and collaborate one another for developing the possible integration of two Projects in future.

(Action: JMA, KMA, AuBoM)

- At the 15<sup>th</sup> session of RA II in 2012, the pilot project becomes the RA II WIGOS project from 2013 to 2016 in the light of its importance in improving dialogue between satellite providers and users in the Region.
- The Co-coordinators of the “RA II WIGOS Project to Develop Support for NMHSs in Satellite Data, Products and Training” submit the WIGOS Implementation Plan (2017-2020) after feedback from satellite users.

(Action: JMA, KMA)

# Thank you
